Introduction

The City of New York, is the most populous city in the United States. It is diverse and is the financial capital of USA. It is multicultural. It provides lot of business oppourtunities and business friendly environment. It has attracted many different players into the market. It is a global hub of business and commerce. The city is a major center for banking and finance, retailing, world trade, transportation, tourism, real estate, new media, traditional media, **SPORTS**, advertising, legal services, accountancy, insurance, theater, fashion, and the arts in the United States. This also means that the market is highly competitive. As it is highly developed city so cost of doing business is also one of the highest. Thus, any new business venture or expansion needs to be analysed carefully. The insights derived from analysis will give good understanding of the business environment which help in strategically targeting the market. This will help in reduction of risk. And the Return on Investment will be reasonable.

Business problem

The City of New York has a huge population and major part of the population is young people and most of them are intrested in playing sports .With the increase in health conciousness people are more intrested in playing sports .So there is a great need of sports facility in the city. This is a good investment if one establish the facility in the right place. So we will try to find a best place to establish a stadium or a sport facility.

Find a suitable location

To be a bussiness successful ,we have to find a best place to establish. Here we are trying to find the best palce for a stadium or a sport facilty .Establishing a sport facility in a place wherethere is a compition is very risky,and also we should look to find a best place to find a place where there is a demand for sports and a place to find a econmical and risk free place to find profits.

Target Audience:

My Client wants to open his business in NewYork , so I only focus on that borough during my analysis. The objective is to locate and recommend to the management which neighborhood of Newyork city will be best choice to start a sports facility.

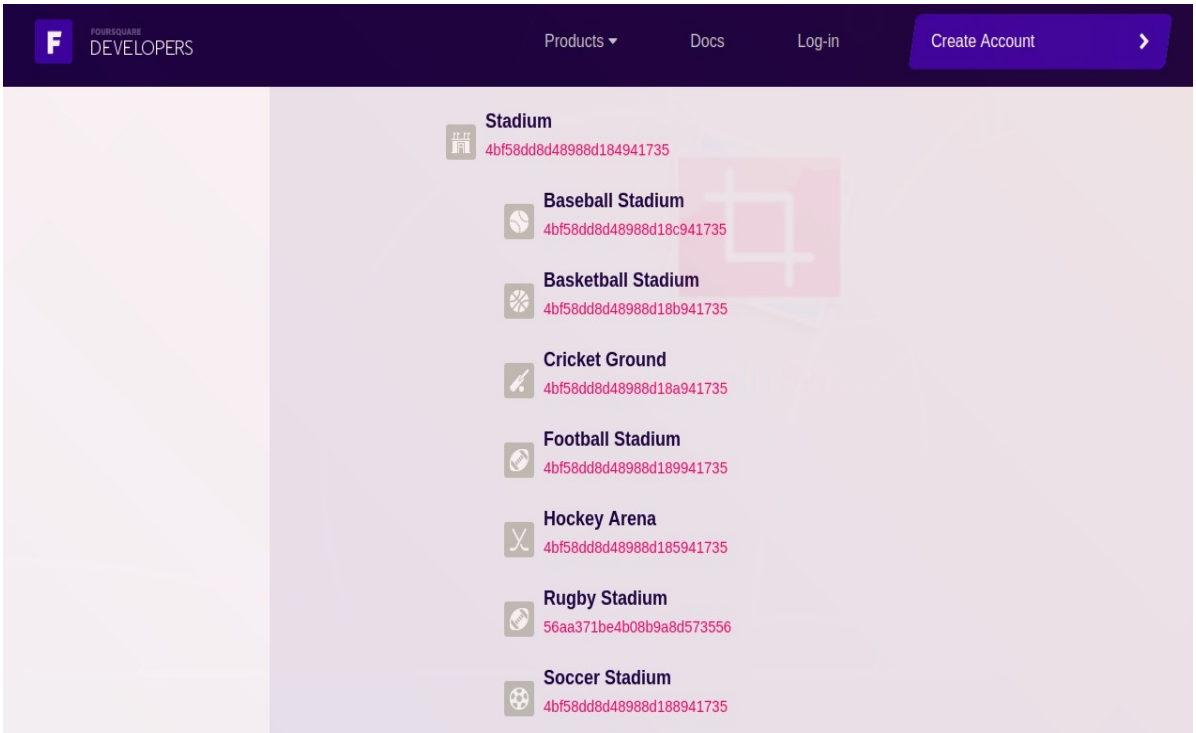
This would intrest people who wants to start a sports facility in NewYork.

Data

Data 1: Neighborhood has a total of 5 boroughs and 306 neighborhoods. In order to segement the neighborhoods and explore them, we will essentially need a dataset that contains the 5 boroughs and the neighborhoods that exist in each borough as well as the the latitude and logitude coordinates of each neighborhood. This dataset exists for free on the web. Link to the dataset is: https://geo.nyu.edu/catalog/nyu_2451_34572.

	Borough	Neighborhood	Latitude	Longitude
0	Bronx	Wakefield	40.894705	-73.847201
1	Bronx	Co-op City	40.874294	-73.829939
2	Bronx	Eastchester	40.887556	-73.827806
3	Bronx	Fieldston	40.895437	-73.905643
4	Bronx	Riverdale	40.890834	-73.912585

Data2: Newyork city geographical coordinates data will be utilized as input for the Foursquare API, that will be leveraged to provision venues information for each neighborhood.We will use the Foursquare API to explore neighborhoods in New York City.



We will take the category ID of STADIUM and retrive the data.

Methodology:

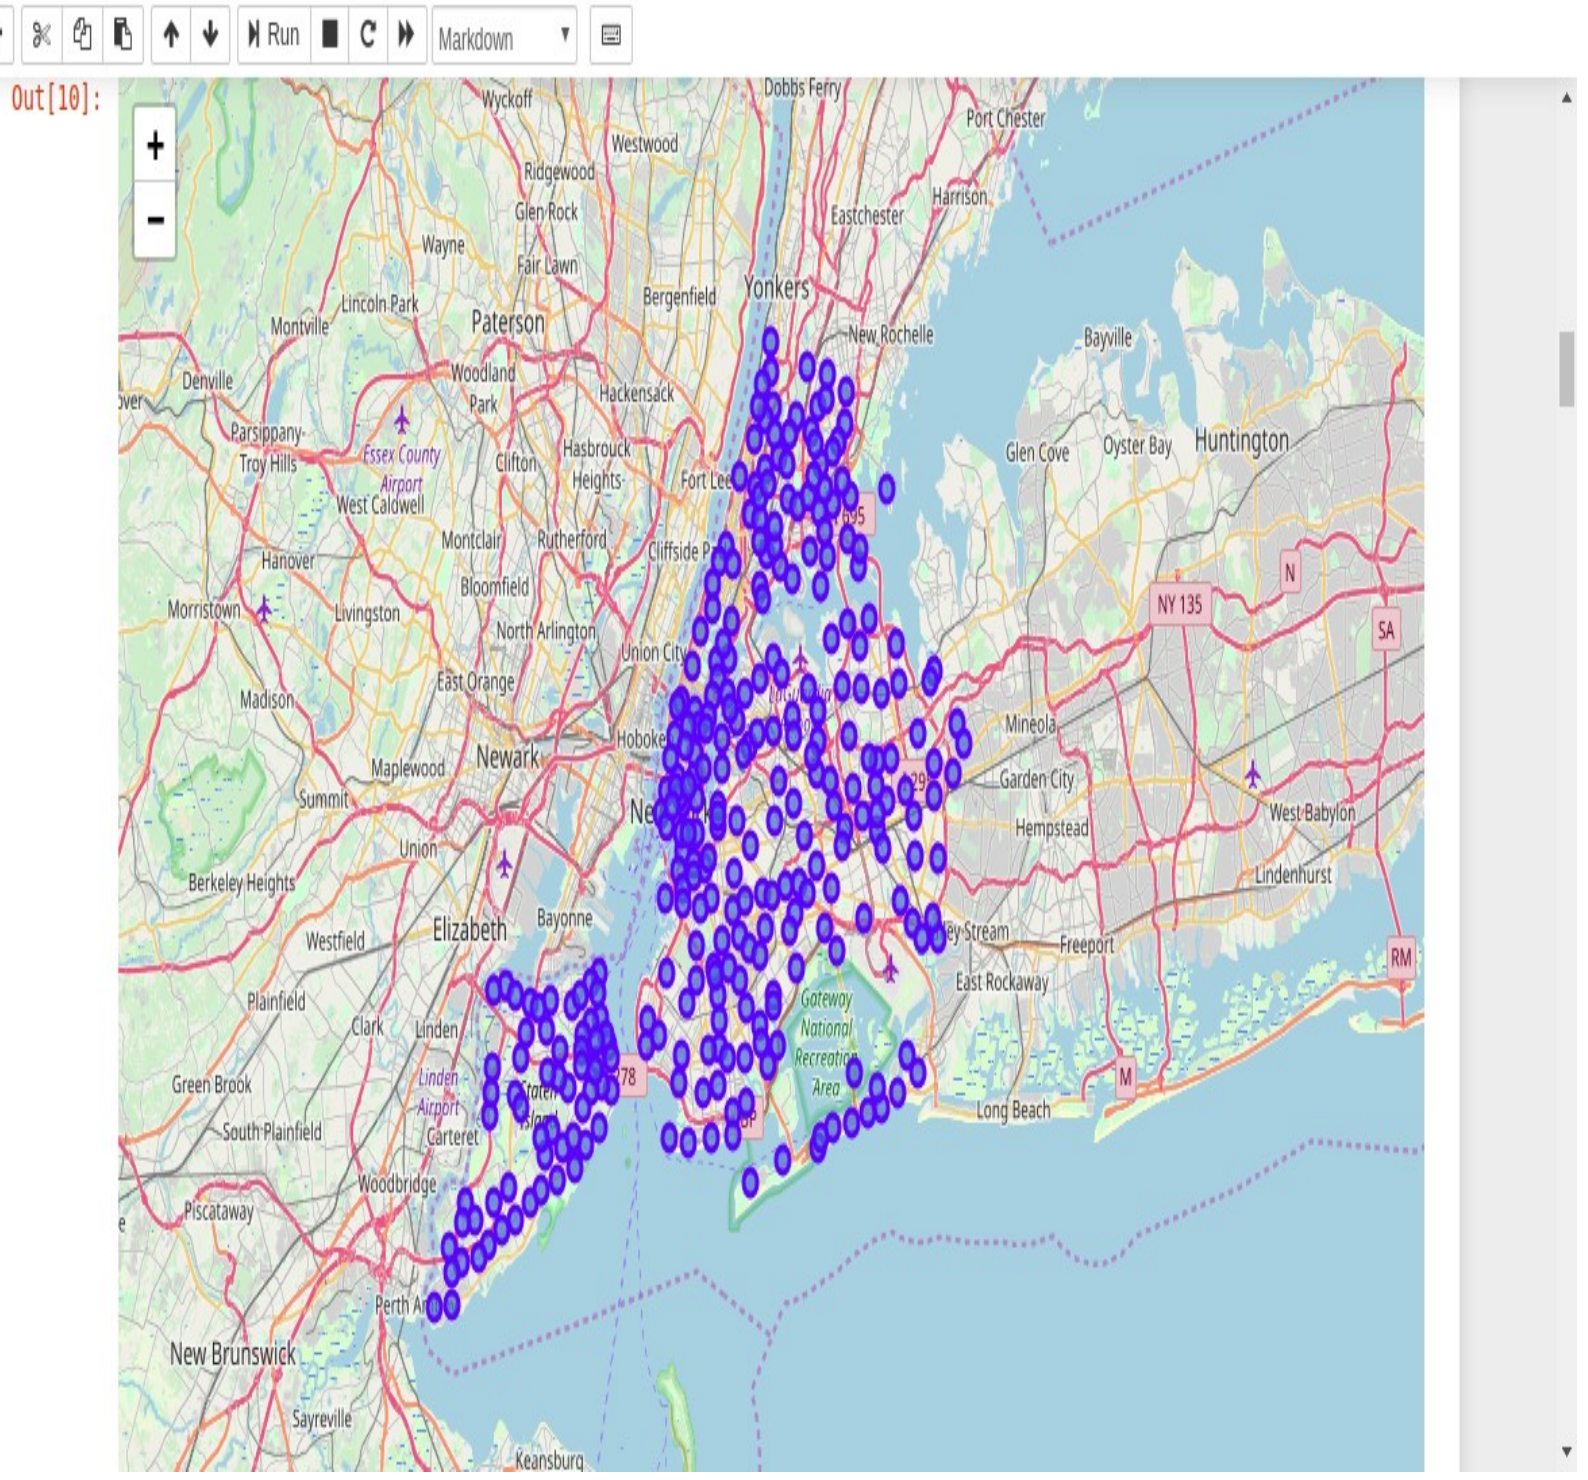
First we will convert data from the various resources into a dataframe

```
In [5]: neighborhoods.head()
```

Out[5]:

	Borough	Neighborhood	Latitude	Longitude
0	Bronx	Wakefield	40.894705	-73.847201
1	Bronx	Co-op City	40.874294	-73.829939
2	Bronx	Eastchester	40.887556	-73.827806
3	Bronx	Fieldston	40.895437	-73.905643
4	Bronx	Riverdale	40.890834	-73.912585

The data frame looks like this .



A MAP OF NEWYORK WITH NEIGHBORHOODS SUPER IMPOSED ON IT

```
#https://developer.foursquare.com/docs/resources/categories
#Stadium = 4bf58dd8d48988d184941735
# footballstadium = 4bf58dd8d48988d189941735
#neighborhoods = neighborhoods[neighborhoods['Borough'] == 'Manhattan'].reset_index(drop=True)
newyork_venues_football = getNearbyVenues(names=neighborhoods['Neighborhood'], latitudes=neighborhoods['Latitude'],
newyork_venues_football
```

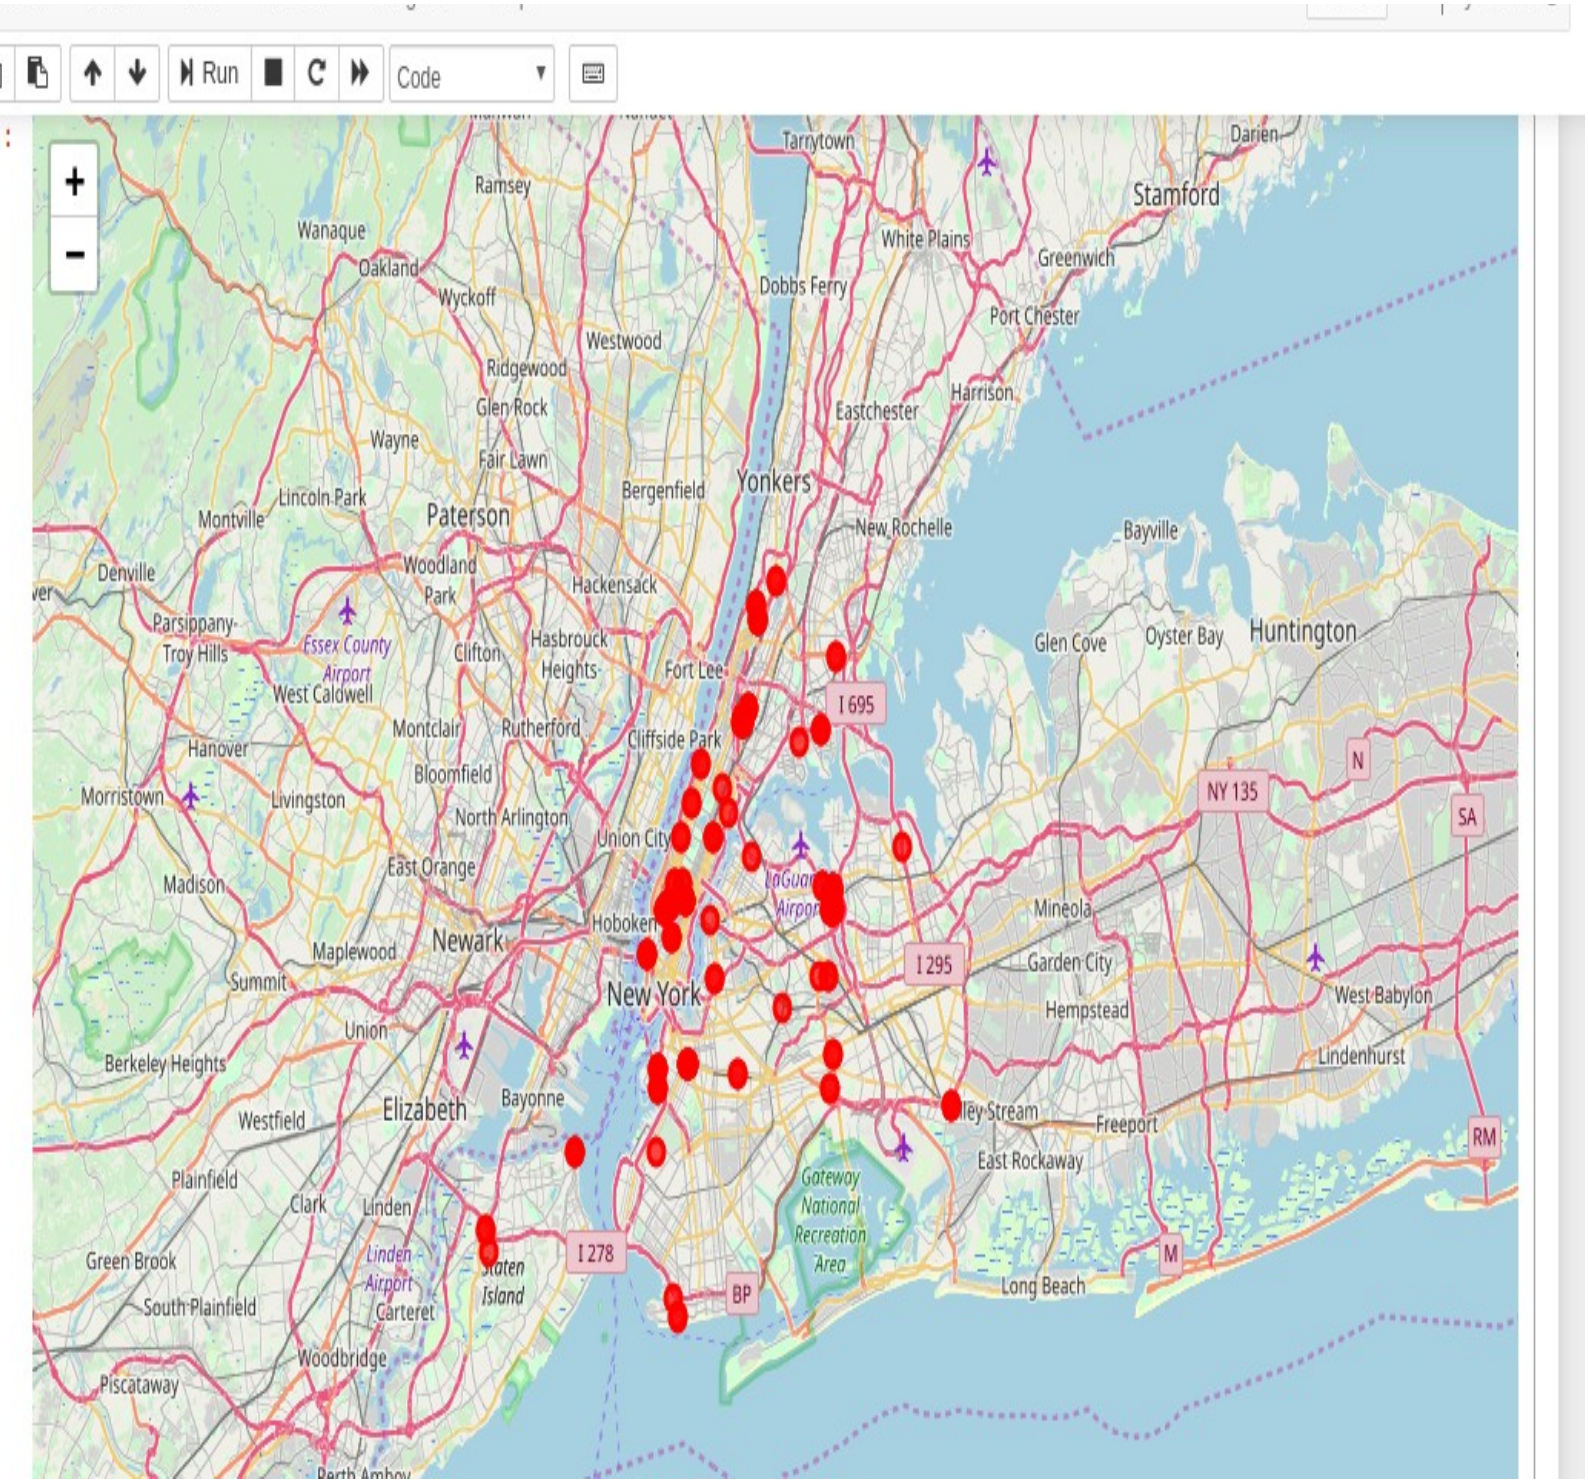
	Neighborhood	Neighborhood Latitude	Neighborhood Longitude	Venue	Venue Latitude	Venue Longitude	Venue Category
0	Fieldston	40.895437	-73.905643	Van Cortlandt Stadium	40.888585	-73.897433	Baseball Stadium
1	Kingsbridge	40.881687	-73.902818	Van Cortlandt Stadium	40.888585	-73.897433	Baseball Stadium
2	Kingsbridge	40.881687	-73.902818	TCR The Club of Riverdale	40.878628	-73.914568	Tennis Stadium
3	Marble Hill	40.876551	-73.910660	TCR The Club of Riverdale	40.878628	-73.914568	Tennis Stadium
4	Marble Hill	40.876551	-73.910660	Rocco B. Commisso Stadium	40.871884	-73.913897	Soccer Stadium
5	Pelham Parkway	40.857413	-73.854756	NY Giant Heaven	40.856223	-73.843575	Football Stadium
6	High Bridge	40.836623	-73.926102	Empire Parking	40.834902	-73.921777	Baseball Stadium
7	High Bridge	40.836623	-73.926102	Joseph Yancey Track And Field	40.828054	-73.928103	Track Stadium
8	High Bridge	40.836623	-73.926102	Yankee Stadium	40.829869	-73.926584	Baseball Stadium

```
newyork_venues_football.shape
```

```
(184, 7)
```

The data is taken from the foursqare.com
https://developer.foursquare.com/docs/resources/categories is the link to get the different catagories of resources in the newyork city
In this project we have taken Stadium as the categories and the Id of the Stadium is

4bf58dd8d48988d184941735
we retrive the data from the foursquare data using the Id and above data will be obtained.



This is the map of newyork superimposing the places where the sports facilities are present.

```
In [39]: ny_grouped = newyork_venues_football.groupby('Neighborhood').count()
         ny_grouped
```

Out[39]:

Neighborhood	Neighborhood Latitude	Neighborhood Longitude	Venue	Venue Latitude	Venue Longitude	Venue Category
Astoria	1	1	1	1	1	1
Bay Terrace	1	1	1	1	1	1
Boerum Hill	2	2	2	2	2	2
Brookville	1	1	1	1	1	1
Bulls Head	2	2	2	2	2	2
Carnegie Hill	1	1	1	1	1	1
Carroll Gardens	2	2	2	2	2	2
Castle Hill	1	1	1	1	1	1
Chelsea	2	2	2	2	2	2
Clinton	5	5	5	5	5	5
Cobble Hill	1	1	1	1	1	1
Concourse	11	11	11	11	11	11
Concourse Village	13	13	13	13	13	13
Coney Island	3	3	3	3	3	3
Corona	4	4	4	4	4	4
Crown Heights	1	1	1	1	1	1
Downtown	2	2	2	2	2	2

We will group the data accourding to the neighborhood and the data will look like this with each neighborhood is having categories like Neighborhood Latitude,Neighborhood Longitude,Venue,Venue Latitude,Venue Longitude and Venue Catogory

Later we will analyise each neighborhood as follows and we will get the following result

	Neighborhood	Baseball Field	Baseball Stadium	Basketball Stadium	College Gym	Conference Room	Food Service	Football Stadium	Historic Site	Hockey Arena	Soccer Field	Soccer Stadium	Sports Club	Stadium	Tennis Court	S
0	Fieldston	0	1	0	0	0	0	0	0	0	0	0	0	0	0	
1	Kingsbridge	0	1	0	0	0	0	0	0	0	0	0	0	0	0	
2	Kingsbridge	0	0	0	0	0	0	0	0	0	0	0	0	0	0

This is the major part of the project applying famous machine learning algorithm called k-means clustering which helps to forms differnt clusters from the given data .
Here we took 5 clusters ,we can take any number of clusters according to our requirement.

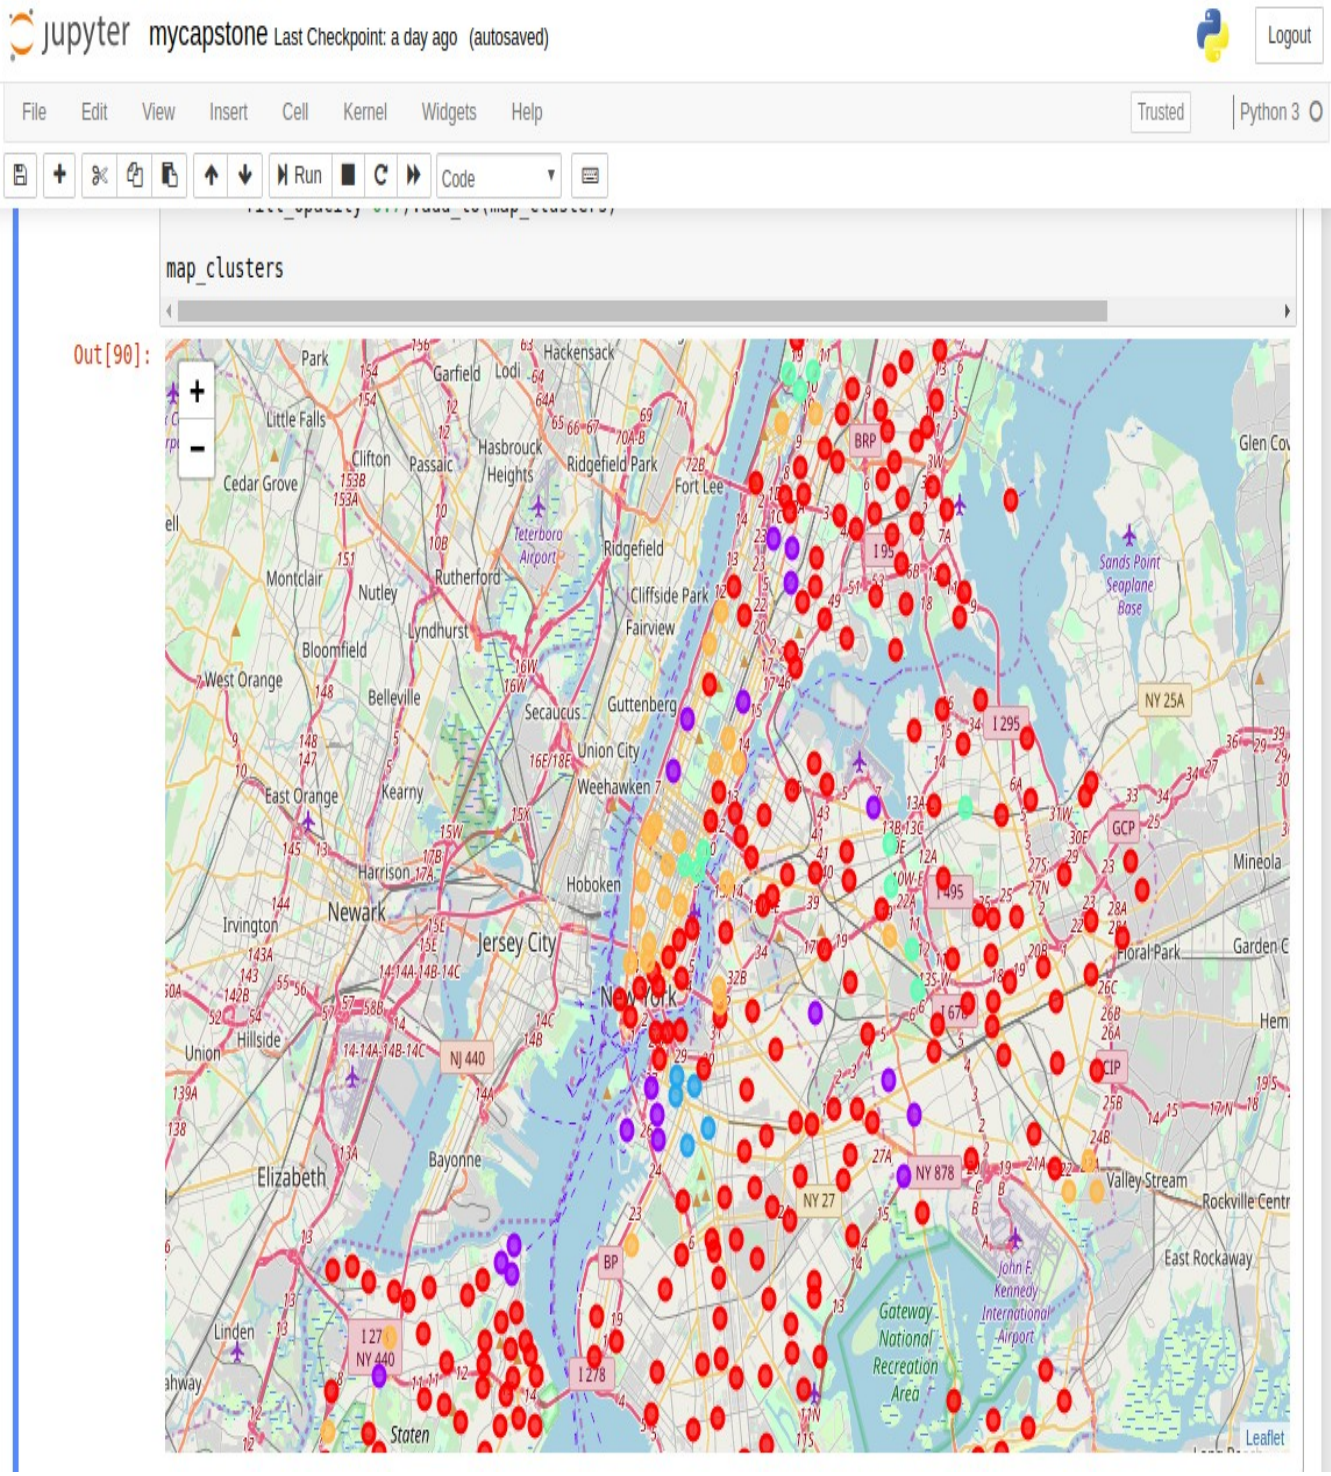
After we apply k-means algorithm to the data we can visualize a map wher we can find different clusters on the newyork city map.



This is how the map looks like and different colors represent different clusters.

RESULTS

Now we will check each cluster rresults individually.

First cluster:

	Neighborhood	Cluster Labels	1st Most Common Venue	2nd Most Common Venue	3rd Most Common Venue	4th Most Common Venue	5th Most Common Venue	6th Most Common Venue	7th Most Common Venue	8th Most Common Venue	9th Most Common Venue	10th Most Common Venue

```

Out[57]:

capston....ipynb ^ Show all ×

Here we can observe the different common venues for the different clusters.By observing the clusters.

If my client want to build a football stadium then cluster 2 and 3 will be the best places where there is less competiton for the football stadium and there people are very intrested in participating in sports activities.

Discussion

In this section, I would be discussing the observations I have noted and the recommendation that I can make based on the results.

This analysis is performed on limited data. This may be right or may be wrong. But if good amount of data is available there is scope to come up with better results.

There is high competition in Midtown and Soho so it is very risky to open business in these areas.
Central Harlem has also potential where closes to Morningside Heights area.
It can be done more detailed analysis by adding other factors such as transportation, demographics of inhabitants.

Conclusion

Although all of the goals of this project were met there is definitely room for further improvement and development as noted below. However, the goals of the project were met and, with some more work, could easily be devleoped into a fully phledged application that could support the opening a business idea in an unknown location.
